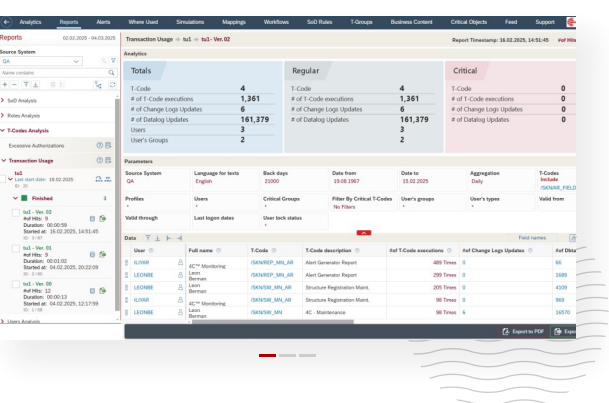
Interactive Platform Walkthrough

See how Skywind detects, analyzes, and reports these issues in real-time



Dashboard Overview - This is what you see daily

Unified view across all SAP landscapes with real-time KPIs, alert summaries, and system health indicators. The dashboard provides instant visibility into your entire SAP environment.

Key Features:

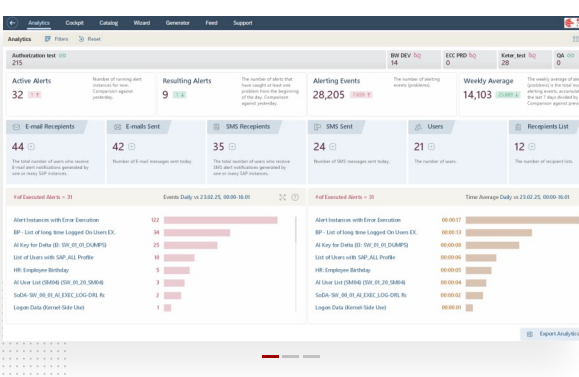
- 50+ exception indicators organized by category
- Real-time system health monitoring
- Critical alerts at a glance
- Multi-system landscape view

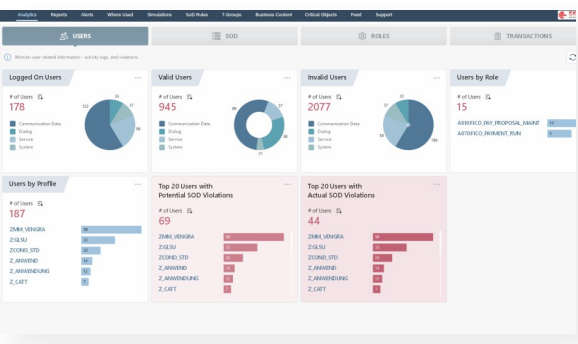
Control Library - 165+ pre-built controls across 9 categories

Choose from pre-configured controls or create custom ones in minutes using no-code Generator.

Control Categories:

- Anti-Fraud & Cyber (30+ controls)
- Business Disruptions (40+ controls)
- Technical Infrastructure (20+ controls)
- Background Jobs (15+ controls)
- Access & Authorization (25+ controls)
- S/4HANA Post-Go-Live (35+ controls)





Alert Inbox - Critical findings appear here in real-time

Real-time notifications pushed to the right people via email, SMS, or dashboard. Dynamic recipient assignment based on alert content ensures the right person gets notified instantly.

Alert Features:

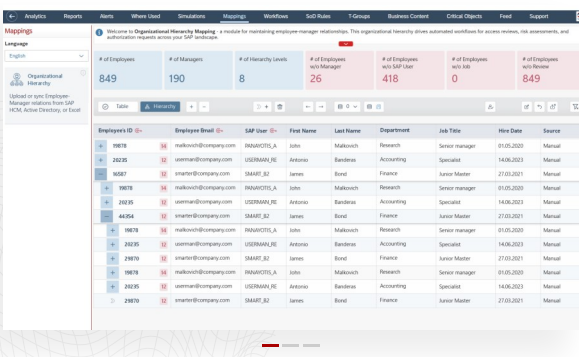
- Priority sorting and filtering
- Severity-based color coding
- Dynamic assignment to responsible parties
- Multi-channel notifications (email, SMS, dashboard)

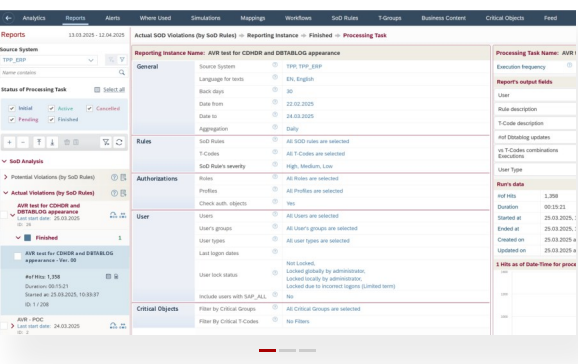
Investigation View - Click any alert to see complete context

Every data point is traceable to source. See WHO did WHAT, WHEN, and WHY it matters. The investigation view provides complete forensic detail for every alert.

Investigation Capabilities:

- Full audit trail with user information
- Historical pattern analysis
- Related alerts and events
- Drill-down to transaction level





Historical Analysis & Patterns - AI-powered detection

Detect mass abnormal activities: 300+ dumps in 10 minutes, 100+ failed jobs, prolonged locks, IDOC failures. AI-powered pattern recognition identifies issues before they become critical.

Pattern Detection:

- Anomaly spike detection
- Threshold breach alerts
- Predictive failure indicators
- Historical trend analysis

Multi-System Integration - Monitor all SAP landscapes from one place

Supports S/4HANA, ECC, BW, CRM, SRM. Integrates with Splunk, QRadar, Sentinel, LogRhythm, and more via Syslog, Web Services, File Transfers.

Integration Features:

- Cross-system unified alerts
- SOC/SIEM integration (Splunk, QRadar, Sentinel, etc.)
- Multiple protocol support (Syslog, Web Services)
- Centralized monitoring for all SAP landscapes

Real Findings | Platform Tour | Customer Stories

Customer Success Stories

Real testimonials from organizations that transformed their SAP operations

Coca-Cola (CBC) - Real-Time Data Availability

Challenge: Need for real-time awareness of SAP BW data upload issues before users notice problems.

Solution: Skywind 4C™ implementation for comprehensive BW monitoring with email and SMS alerts.

Results:

- Real-time notification of failed uploads within minutes
- Detection of uploads that didn't start when expected
- Identification of old/irrelevant processes consuming resources
- Early detection of inactive components before night uploads

> "The integration of the system helped us get the information in real time. We are the first to know about faults or incompleteness of the data uploads before the users, leaving us time to address the problem and improve the customer experience of system stability."

— Nili Zinger, BI Director & Meital Hayoun, BW Implementation Lead

Maccabi Healthcare - Enterprise-Wide Monitoring

Challenge: Managing SAP environment with 14,000+ users across ECC, BW, Portal, GRC, and BO systems.

Solution: Comprehensive SkyAPS™ platform deployment across all SAP modules.

Results:

- Dynamic recipient notifications based on event content
- Automatic response and repair of system malfunctions
- Early detection of upcoming failures
- Shortened response times for BASIS and BW teams
- 24/7 critical process availability ensured

> "Implementation of Skywind 4C™ enabled us to effectively control exceptional activities that are monitored before organizational processes are affected or invalidated."

— Ofer Zeinfeld, SAP Operations Manager

Financial Institution - Fraud Detection

Challenge: Client was confident their strong authorization controls would prevent any incidents.

Discovery: Skywind identified vendor bank account switched every quarter for 4 days, with payments redirected.

Impact:

- Two-party collaboration fraud scheme exposed
- Multiple quarters of fraudulent payments stopped
- 150+ additional alerts deployed for comprehensive protection
- Real-time monitoring of alternative payee assignments

> "We were certain the pilot wouldn't find anything due to our strong authorization controls. Skywind identified collaboration between two authorized parties covering each other's tracks."

Manufacturing Company - Process Optimization

Challenge: Production orders not matching customer orders, causing disruptions and delayed deliveries.

Solution: Real-time comparison between customer orders and production orders.

Results:

- Continuous operations enabled
- Manufacturing disruptions eliminated
- Delivery delays prevented
- Profit margins protected

> "4C™ real-time comparison between customer orders and production orders eliminates mismatch in time and enables continuous operations."
